ABSTRACT OF THE DISCLOSURE

A method for automatically creating at least one dialog box on an operator interface of a computer user station, which is connected to an industrial process installation via at least one interface so as to transmit data (e.g., process data, status data, control and/or regulating data). The created dialog box displays the transmitted data of the process installation on the operator interface. Further, the data of the process installation that is to be displayed is assigned to certain, stored data types. The at least one dialog box is created on the operator interface of the computer user station so as to display the data to be graphically represented by means of display types (e.g., pointers, bars, numerical displays, etc.), which are assigned to the respective data types.
